- No bolt on or welding required, leaving no damage to container after un-install

### Divider Wall Description:

This shipping container divider wall has become a huge hit with self storage companies by allowing them to convert one large container into two separate storage spaces that are completely secure from each other. The Insta divider requires no bolting or welding to the container leaving absolutely no evidence of ever being installed once removed. Installation takes less than twenty minutes and can be installed in just about any location within the container.
